#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-2, 4, 7-8, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sheffer (U.S. Patent 5,884,184).

As to claims 1 and 7, Sheffer teaches the steps of: scanning available cellular control channels (col. 7, lines 40-42; col. 3, lines 62-66) and measuring the signal strength of each cellular control channel (col. 7, lines 43-48); selecting multiple forward control channels having a signal strength below a preselected threshold and eliminate those control channels and continue to selection the remaining multiple control channels (col. 8, lines 41-59; col. 4, lines 19-25) which is verified as being available for the assigned carrier to report a status of the fire alarm system (col. 1, lines 5-7; col. 2, lines 34-37 and lines 47-49; col. 3, lines 3-6; col. 5, lines 1-12); transmitting a cellular radio message on the status of the fire alarm system over either of the cellular control channel with the strongest signal strength or the cellular control channel with the second strongest signal strength (col. 4, lines 10-17). Therefore it would have been obvious to one or ordinary skill in the art that selecting a cellular control channel with the strongest

signal strength and second strongest signal strength since eliminating the control channels having signal strength below a preselected threshold.

As to claims 2 and 8, Sheffer teaches developing a channel list in which the cellular control channels (col. 3, line 66 through col. 4, line 2) are sorted and classified according to signal strength (col. 4, lines 4-10 - where Sheffer discussed selecting a control channel based on a comparison of the stored preselected criteria or characteristics, for example sorted according signal strength).

As to claim 4, Sheffer teaches repeating and selecting a cellular control channel with the strongest signal strength until the last available channel is found (col. 8, lines 44-59).

Claim 10 is rejected for the same reasons as discussed above with respect to the third limitation of claim 1.

## Allowable Subject Matter

3. Claims 3, 5-6, 9, and 11-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Response to Arguments

4. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
